ENDOCRINOLOGY FELLOWSHIP PROGRAM

The NIH Inter-Institute Endocrinology Fellowship Program (IETP) is a 3-year Accreditation Council for Graduate Medical Education (ACGME) accredited program that provides comprehensive clinical training combined with experience in clinical, translational or basic science research to promote our mission to improve the health and quality of life of patients with disorders of the endocrine system.

THE ENDOCRINOLOGY FELLOWSHIP provides training ideal for physicians who seek education in both clinical and research endocrinology. At the NIH, you have access to a training experience that is unparalleled; it is both broad, highly specialized, and offers:

- One-on-one working relationships between fellows and supervising faculty, many of whom are world renowned experts in the field
- Exposure to a variety of endocrine disorders ranging from common to rare
- Access to specialized testing units and experts in interventional procedures (adrenal, inferior petrosal sinus, and parathyroid vein sampling, neurosurgery and endocrine surgery teams, etc.)
- Specialized diabetes clinics and multidisciplinary inpatient glucose management team
- Specialized training in FNA procedures with on-site cytopathology and individualized ultrasound training
- The ability to engage in a hands on way in cutting edge clinical and translational research from the earliest stages of training

THE ENDOCRINE FELLOWSHIP TRAINING PROGRAM at the NIH has a long history of training clinicians and physician scientists. Our alumni include Nobel laureates; Members of the National Academy of Sciences; and Deans, Department Chairs, and Professors at major medical schools. We are proud that most of our graduates go onto academic medicine as well-trained clinicians and physician-scientists.
