

Female Virilization

- Anogenital Ratio

anogenital ratio = the distance between the anus and the posterior fourchette divided by the distance between the anus and the base of the clitoris.

An anogenital ratio > 0.50 suggests labioscrotal fusion, and indicates a need for further evaluation.

- Clitoromegaly

AP diameter x transverse diameter

$> 35 \text{ mm}^2$ abnormal

$> 100 \text{ mm}^2$ virilization
